# Data Points

Issue 62                                                      January 26, 2006

## Field Updates

- The age limit for clients coded as having a Developmental Disability or Developmental Delay (in Client Field 46) will increase from 6 years old to 10. The Editor will check that clients coded as "1 – Developmental Delay" are **under 10 years old**, and that clients coded as "2 – Developmental Disability" are ages **10 or over**. Possible errors will be generated for clients whose ages fall outside of these allowed ranges.

- Primary Language vs. Ability to Understand English:
    - If a client's primary language is English, enter "ENG" in Client Field 74 – "Primary Language Used by Client." Otherwise, enter the appropriate 3-character Language code (a full listing of these codes can be found in the "Language Codes" report in the Reports drop-down box at http://mhmr.ky.gov/cmhc/cmhc_data_guide.asp).

    - If the Client's primary language is English (and "ENG" was entered in field 74), enter "6" in Client Field 75 – "Ability to Understand English". Otherwise, enter code "0" through "3", as appropriate, to indicate the **interviewer's assessment** of how well the client is able to understand English.

- A new code will soon be available for Human Resources Field 7 – "Employment (Affiliation) Status with the Organization". Code "9-Sub-contract/ Affiliated Staff" can be used for those staff for whom full data is not available. Staff members with this code will not require fields "Date of Employment", "Separation Date", "Highest Degree/Education", or any of the "Language" or "Taxonomy" fields.

The on-line Data Submission Guide and the Editor program will be updated soon to reflect these changes. RDMC will notify all Centers when the Editor updates are implemented.

## Completeness clarification

The Unknown code for fields in the Client Data Set was split into 3 separate codes ("xx6 – Not Applicable", "xx7 – Unknown", "xx8 – Not Collected") due to a TEDS requirement. Not Applicable ("xx6") should be used when the field does not apply to the client (e.g. "Pregnant Women" does not apply to male clients; "Ability to Understand English" does not apply to clients whose "Primary Language" is English). TEDS uses "Not Collected" when the submitting state does not collect that field. For example, Kentucky does not collect "Days Waiting to Enter Treatment," and so uses Not Collected when reporting this field to TEDS. In our Data Set, for most of the Status 1 clients' required fields, "xx6" (Not Applicable) and "xx7" (Unknown) are treated the same as "xx8" (Not Collected) for the Completeness validation. The Data Submission Guide will be updated shortly to more accurately reflect this.

## Updated Drug Codes
